Nand Dave

Applied AI Engineer | Voice & LLM Agents | Evals

nand@brokailabs.com • LinkedIn • GitHub

Applied AI engineer and two-time founder with 3 years across data and AI roles, taking LLM agents from idea to production: voice agents with persistent memory and tool integrations, Python/FastAPI backends and data pipelines at 6,000+ hours/week. Experience spans customer discovery, engineering rollout and repeatable agent evaluations.

WORK EXPERIENCE

Founder & Lead AI Engineer | Brokai Labs, Bengaluru, India *Nov 2025 – Oct 2026*

- Launched a Retell-powered AI voice receptionist for Brokai's first paying customer, a US salon, owning it from customer discovery through rollout; it handles enquiries, bookings and rescheduling, producing about 240 confirmed bookings from about 300 calls a month with no customer churn.
- Architected Jarvis to stop context loss across Slack, Linear, Gmail and Calendar: a LiveKit voice agent with persistent memory that executes cross-tool tasks from spoken commands; ran eval rounds of 30–40 cases on task completion, tool routing and answer relevance, reaching sub-800ms end-to-end latency.
- Shipped an explainable prospect-ranking workflow that analyzed 10,000+ customer reviews and scored 700+ businesses on seven factors, returning a rejection reason for every exclusion so each decision was auditable.

Founding AI/ML Engineer | Oaklet, Berkeley, CA *Sep 2025 – Oct 2025*

- Developed a tool-calling healthcare appointment agent that booked appointments, reserved calendar slots and sent emails as Oaklet's first AI engineer.
- Implemented a patient-intake workflow spanning seven question types in React, Express/TypeScript and DynamoDB, with encryption, audit logging and retry handling.

AI Engineer | Centific, Bellevue, WA *May 2024 – Aug 2025*

- Engineered an Azure Blob Storage and Label Studio audio pipeline processing 6,000+ hours weekly across 6+ locales, reducing processing time 70% and failures 85% while maintaining 99.5% uptime.
- Designed human-in-the-loop speaker-label validation for noisy audio, achieving 95%+ labeling accuracy.
- Built near-duplicate detection across 10+ languages, including right-to-left and character-based scripts, reducing associated costs 30%.

Data Scientist (Co-op) | 7-Eleven, Irving, TX *Jun 2022 – Dec 2022*

- Rebuilt ETL pipelines in PySpark across 10+ sources, improving data accuracy 18% and cutting KPI runtimes 23.7%; automated unsupervised clustering of 1,000+ promotional offers at 98.2% accuracy, saving 1,000+ manual hours a year.

Founder | ANA Packaging & Trading, Bengaluru, India *Jun 2020 – Jul 2021*

- Managed inventory and buyer-risk decisions at a paper-cup manufacturer using R/SQL analysis and A/B tests; stockouts fell 17%, payment defaults 70% and order conversion rose 16.2% during the business period.

PROJECTS

Hapi - agent tool-execution API (prototype)

- Prototyped a FastAPI tool-calling API with 28 defined actions across Gmail, Sheets, Slack and PostgreSQL, adding authentication, credential encryption, schema migrations and execution logs for auditable agent actions.

PUBLICATIONS

LegalWiz: A Multi-Agent Generation Framework for Contradiction Detection in Legal Documents (NeurIPS 2025 GenProCC Workshop) — Multi-agent benchmark generating synthetic legal documents with six contradiction types to evaluate contradiction detection in legal RAG pipelines.

Scalable Multilingual PII Annotation for Responsible AI in LLMs (IEEE ICDM Workshops 2025) — Human-in-the-loop annotation framework covering 13 locales and ~336 PII types, producing high-fidelity datasets for LLM fine-tuning.

SKILLS

Generative and agentic AI: LLM agents, agent memory, tool calling, RAG, multi-agent systems, LangChain, LangGraph, prompt engineering, real-time voice AI (LiveKit, Retell, OpenAI Realtime API)

Machine learning: LLM evaluation and benchmarking, supervised and unsupervised learning, ranking and scoring systems, clustering, near-duplicate detection, A/B testing, human-in-the-loop annotation

Speech, vision and deep learning: PyTorch, OCR, Whisper / ASR, Label Studio

Programming and infrastructure: Python (Pandas, NumPy, PySpark), SQL, TypeScript, React, Next.js, Express, FastAPI, PostgreSQL, DynamoDB, R, Docker, AWS (Certified Cloud Practitioner), Azure

EDUCATION

Northeastern University, Boston, MA — M.Sc. Engineering Management, Specialisation in Data Science
